

ContinuitySA Bandwidth Services

*High Speed
Connectivity
Solutions*

Our Business is Keeping You in Business

Adding Value to Your Recovery Strategy

Bandwidth Services from ContinuitySA present an exciting offering to take BCM into the world of modern voice and data telecommunications.

Our Bandwidth Services leverage off our ability to syndicate bandwidth infrastructure with multiple clients, delivering secure, uncontested, highly scalable connectivity solutions at really affordable prices.

High speed bandwidth to ContinuitySA's recovery centres will allow you to re-evaluate your entire backup and recovery strategy, and enable you to realistically consider relying less on your tape based environment and realising the benefits associated with a replicated or mirrored recovery environment.

Connecting to ContinuitySA will enable you to eliminate backups to tape and transmit them to disk at our secure premises to achieve rapid system recoveries, facilitate VOIP solutions, as well as link to the Seacom undersea cable which terminates in Midrand at Neotel premises close to our Growthpoint Park Recovery Centre.

*“High speed, affordable bandwidth is a vital component of growth in business, education and in attracting international investment”
– Shuttleworth Foundation*

Secure Offsite Data Storage

Ensuring that your critical data is securely stored at an offsite location forms an integral aspect of a successful Business Continuity strategy and is easily achievable with the increasing availability of high speed bandwidth.

Connecting your network to ContinuitySA's highly secure Recovery Centres ensures that your critical data is protected, up to date and readily available when you need it most, accessible in close proximity to your recovery environment.

Service Portfolio

We partner with major tier network providers to provide you with a broad range of practical bandwidth solutions, and provide transparent vendor management ensuring that your network is always on, and always available.

Our focus remains the provision of world-class Business Continuity solutions, with our Bandwidth Services assisting you to achieve network functionality that supports your Business Continuity Strategy.

Our secure, high quality solutions link your network to our Recovery Centres to help you to achieve:

- Network Resilience
- Electronic Vaulting
- Offsite Backup
- Data Replication
- Dual Processing
- Cloud Computing
- Live Remote Office Workspace
