

ContinuitySA Standby Services

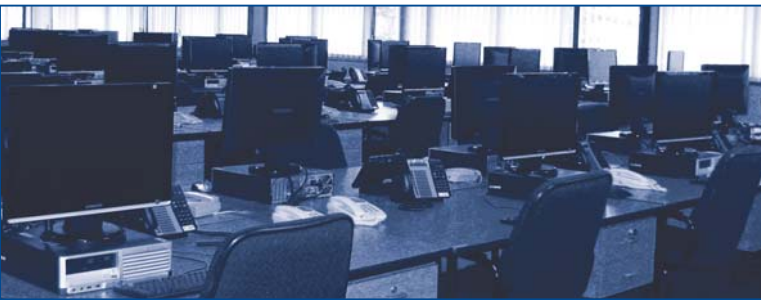

*Business Continuity
Solutions*

Our Business is Keeping You in Business

World Class Recovery Centres

Standby Services from ContinuitySA provide companies with state-of-the-art recovery environments in which to recover their critical business processes should they be unable to function in their primary place of business for any reason. ContinuitySA operates over 3,500 work area recovery seats at various Recovery Centres located throughout Southern Africa, as well as a comprehensive range of ICT recovery equipment that caters to a broad range of technology requirements. Our expansive, fully equipped Recovery Centres are maintained in a constant state of readiness in order to ensure rapid occupation by our clients when needed. The flexible design and large scale of infrastructure deployed within 30,000m² of recovery space enable the simultaneous recovery of multiple clients at any given time.

Work Area Recovery

Separate recovery suites of various configurations ranging from single executive offices to large open plan work areas are equipped with desktop computers, telephones and office automation services, enabling the recovery of any size and type of business. Multiple call centre and financial trading environments are provisioned with specialised call centre and dealer telephony systems, Reuters and Bloomberg information feeds.

Supporting facilities include meeting rooms, boardrooms and crisis management centres, as well as rest and relaxation areas located throughout the Recovery Centres, creating an environment that is highly conducive to recovery operations.

ICT Recovery

ContinuitySA provides an extensive selection of ICT recovery equipment that caters to a diverse range of technology requirements. Our data centres are equipped with a wide range of server platforms, tape devices, network appliances and storage mediums, enabling the recovery of any type of operational ICT environment.

Secure, Resilient Infrastructure

ContinuitySA understands the importance of security and resilience, and our Recovery Centres are designed with these aspects in mind. All electronic equipment is protected

with UPS and backup generator power that allows our facilities to operate continuously in the event of a power outage. Access to and within the Recovery Centres is strictly controlled, placing emphasis on the protection of our clients' valuable information and resources.

Recovery Testing

Recovery testing forms an integral part of a successful Business Continuity strategy, and our highly maintained and fully operational recovery environments enable our clients to regularly test their recovery procedures in order to build the confidence that their businesses can be recovered to a consistent state. Our experienced and dedicated support staff are available to assist our clients with their recovery process, the co-ordination of tests, or the complete management of the entire recovery process.

Supplementary Services

ContinuitySA's portfolio of supporting services provides our clients with the appropriate resources to develop practical and demonstrable ICT and work area recovery strategies. Additional services available from ContinuitySA include:

- Bandwidth / Network Services
- Outsourced Recovery
- Rapid Desktop and Server Deployment
